ITC2303 – Visual Application Programming

What is Scratch?

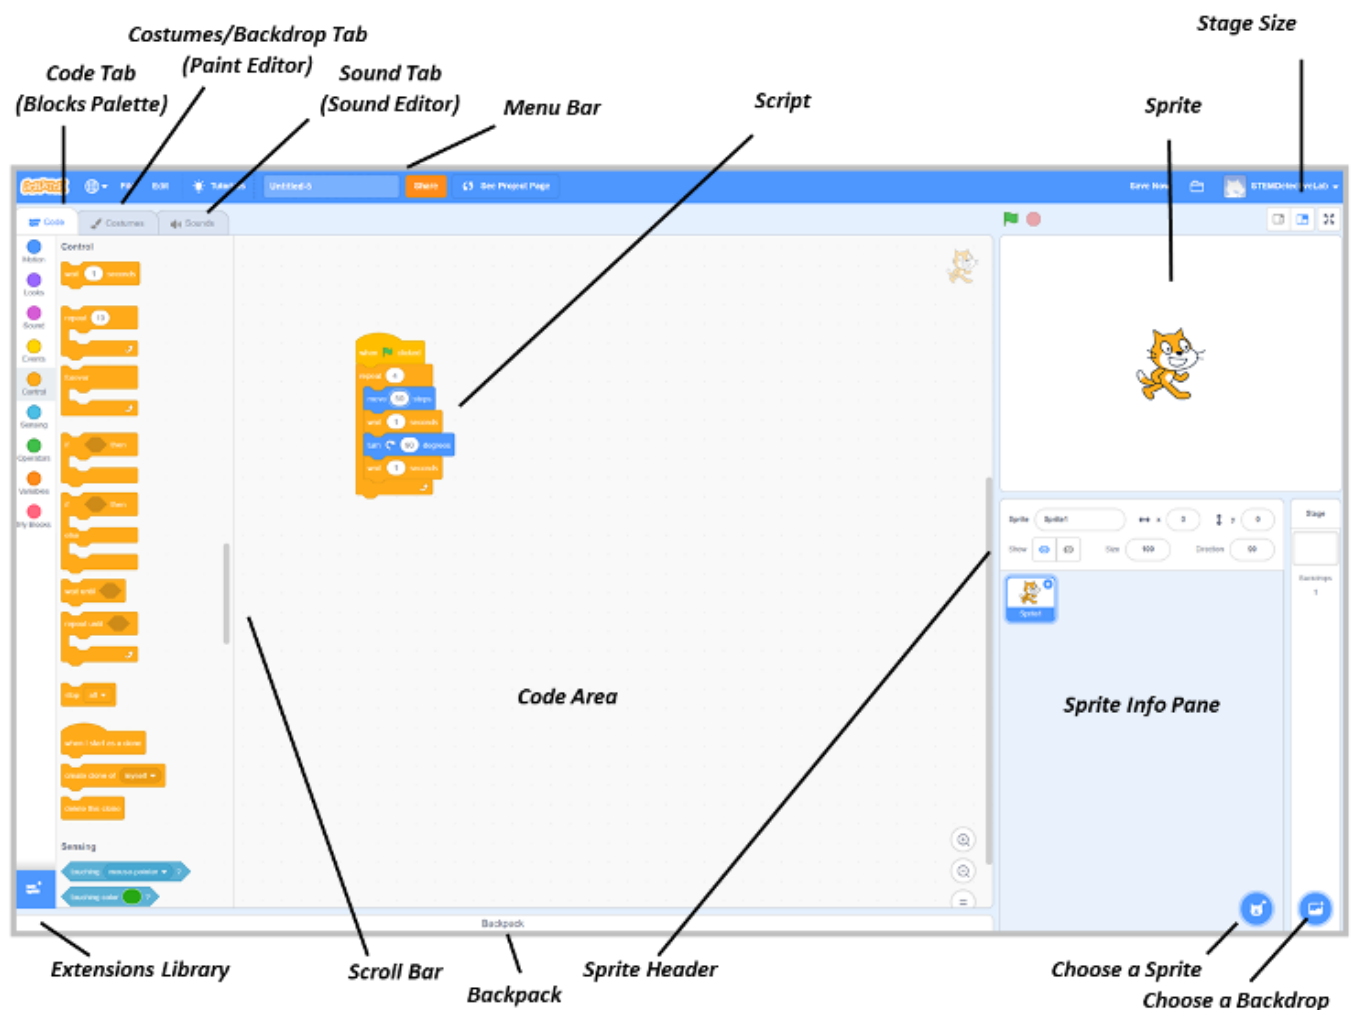

Scratch is used to help beginners to learn programming in a fun way through a visual interface, encouraging creativity, problem-solving, and collaboration.

How to install Scratch in a local computer?

1. **Go to the Scratch Website:** Visit the official Scratch website at <https://scratch.mit.edu/download>.

2. **Download Scratch:** Look for the "Create" menu on the top of the website and select "Download Scratch." This will take you to the download page.
3. **Choose the Right Version:** On the download page, you'll see options for different versions of Scratch. Select the appropriate version based on your operating system. Scratch is available for Windows, macOS, and Linux.
4. **Download and Install:** Click on the download link for your operating system, and the installation file will be saved to your computer. Once the download is complete, run the installer and follow the on-screen instructions to install Scratch on your local machine.
5. **Launch Scratch:** After the installation is complete, you can launch Scratch by finding it in your applications or programs list. Double-click on the Scratch icon to start the program.
6. **Start Creating:** Now that Scratch is installed on your computer, you can start creating your own interactive stories, games, and animations by dragging and connecting code blocks in the Scratch interface.

Exercise 01

In this exercise, you are supposed to build a mini-game using Scratch. You can follow the below link to complete this work.
